## **CLAIMS**

What is claimed as our invention is:

- A method for removing conjugated olefins from a composition comprising:
  contacting the composition with a Diels-Alder dienophile to convert
  conjugated olefins to a Diels-Alder adduct; and
  arresting the Diels-Alder adduct.
- 2. The method of claim 1 further comprising arresting the Diels-Alder dienophile.
- 3. The method of claim 1 wherein the Diels-Alder adduct is arrested via a selectively permeable barrier.
- 4. The method of claim 3 wherein the selectively permeable barrier is a membrane.
- 5. The method of claim 1 wherein the Diels-Alder adduct is arrested via a phase differential.
- 6. The method of claim 5 wherein the Diels-Alder adduct is a solid and the composition is not a solid.
- 7. The method of claim 6 wherein the Diels-Alder dienophile comprises maleic anhydride, benzoquinone, or combinations thereof.
- 8. The method of claim 5 wherein the Diels-Alder adduct is a liquid and the composition is not a liquid.
- 9. The method of claim 3 wherein the selectively permeable barrier is disposed in a vessel.
- 10. The method of claim 9 wherein the selectively permeable barrier forms a removable container arresting the Diels-Alder adduct.
- 11. The method of claim 6 wherein the solids are disposed in a filter.

- 12. The method of claim 11 wherein the filter comprises alumina, activated carbon, or combinations thereof.
- 13. The method of claim 1 further comprising recovering a composition having a lower concentration of conjugated olefins.
- 14. The method of claim 13 wherein the recovered composition comprises less than or equal to about 80 parts per million by weight of conjugated olefins.
- 15. The method of claim 13 wherein the lower concentration of conjugated olefins is about 25 percent lower.
- 16. The method of claim 13 wherein the recovered composition comprises less than or equal to about 5 weight percent of Diels-Alder dienophile.
- 17. The method of claim 13 wherein the recovered composition comprises less than or equal to about 5 weight percent of Diels-Alder adduct.
- 18. A method comprising:

confining a Diels-Alder dienophile to a first side of a selectively permeable barrier wherein the barrier is more permeable to conjugated olefins and less permeable to Diels-Alder dienophile and Diels-Alder adduct; and

contacting a composition comprising mono-olefins and conjugated olefins with the Diels-Alder dienophile to form Diels-Alder adduct;

wherein the contacting reduces the concentration of conjugated olefins in the composition.

19. The method of claim 18 wherein the contacting further comprises exposing the composition to a second side of the barrier such that conjugated olefins permeate to the first side of the barrier.

- 20. The method of claim 19 wherein the contacting results in a lower concentration of conjugated olefins in the composition on the second side of the barrier.
- 21. The method of claim 20 wherein the Diels-Alder dienophile and Diels-Alder adduct are confined to the first side of the barrier.
- 22. A method for removing conjugated olefins from a composition comprising bubbling the composition through a liquid comprising Diels-Alder dienophile to form a liquid comprising Diels-Alder adduct.
- 23. A method for removing conjugated olefins from a non-solid composition comprising contacting the composition with a solid comprising Diels-Alder dienophile to form a solid comprising Diels-Alder adduct.
